

Beside the Seaside

GRP – THE SEASIDE DOOR FROM WESSEX ■

Sun, sea and sand..... a perfect combination for the rapid destruction of your average steel garage door.

The corrosive effects of salt laden air in coastal locations can be easily seen in rusting front gates, rusting door hinges and rusting garage doors.

Great Britain has a coastline of over 11,000 miles - and with sea air going a long way inland - lots of homes feel the effects.

That's why GRP is the perfect material for coastal homes.

GRP is a tough, strong polyester and fibreglass laminate that is virtually maintenance free. It won't rust, warp, crack, or delaminate and its' high gloss or lifelike woodgrain finish will resist salt laden air for years and years to come. Look how many GRP yachts are out there!

Even local authorities with properties along the coast are switching from steel to GRP doors with many now specifying GRP as they are much longer lasting and therefore better value for money.

Available in a wide range of styles, sizes and lifting gear – including a range of vertical lift sectional doors – Wessex GRP doors positively prosper on the beach.
